SUMMARY

Full-Stack Software Engineer with 2 years of experience in the fintech sector. Focused on building scalable monorepo systems and secure, high-performance applications using React, Angular, and Node.js.

EXPERIENCE

Associate Software Engineer

Finhero | September 2024 – March 2026 | Tanjung Tokong, Pulau Pinang, Malaysia

- Set up and managed a TypeScript monorepo to manage multiple financial products in one place , including a specialized platform for car dealers (partnered with RHB) , iPay88, and Biztory , while also building a separate auto loan system for the RHB and Mudah.my partnership using Node.js, TypeScript, and MySQL.
- Built a custom form-building tool using JSON and React Hook Forms to save time on the RHB Personal Loan and Biztory projects and led the end-to-end development of the "Device as a Service" (DaaS) platform for ICT Zone, building their enterprise laptop rental system from scratch.
- Enhanced system security and reliability by implementing Azure SAS tokens, JWT/OAuth2 authentication and migrating legacy PHP modules to Node.js microservices.
- Improved development efficiency by integrating CI/CD pipelines via GitHub Actions, maintaining Docker environments and increasing test coverage by 60% with Cypress.
- Collaborated directly with design and marketing teams to turn Figma concepts into functional interfaces, while helping newer engineers get comfortable with the overall system architecture.

Software Engineer Intern

Finhero | March 2024 – September 2024

- Built and maintained B2B web applications using AdonisJS, which allowed clients to manage their accounts and view detailed analytics reports.
- Created a Python-based automation tool to analyze PDFs, which improved document management by automatically extracting and categorizing data like file size and status.
- Developed a secure API for financial data integration, focusing on keeping data synchronized in real-time with major financial software.
- Contributed to an SME lending management system, building out frontend features with Angular and Tailwind CSS while optimizing the MySQL database structure.
- Documented API endpoints and system architectures, making it much easier for cross-functional teams to understand the technical setup.
- Worked within an Agile team to handle the full development lifecycle, from gathering requirements to testing and deployment.

PROJECT

International Student Services Application

Final Year Project – 2023 | Universiti Teknikal Malaysia Melaka (UTeM)

- Developed a Kotlin-based mobile application with Firebase integration for real-time data storage and secure user authentication.
- Streamlined access to vital information and services for foreign students, enhancing user accessibility and engagement.

iCondo

Workshop 2 – 2023 | Universiti Teknikal Malaysia Melaka (UTeM)

- Built an application using Android Studio, JavaScript, and MySQL to automate several tasks for condominium management, such as parcel collection, facility booking, and visitor management.
- Improved operational efficiency and streamlined administrative processes for condominium management.

HelpConnect Web Application

2022

- Developed a PHP-based web application to connect elderly individuals with volunteers, focusing on improving social well-being through community resource integration.

Object Detection

AI Project – 2022 | Universiti Teknikal Malaysia Melaka (UTeM)

- Implemented object detection using TensorFlow and SSD MobileNet V3 architecture for real-time detection in images and videos.
- Ensured rapid and accurate detection suitable for security and automation applications.

Clothing Store Management System

Workshop 1 – 2021 | Universiti Teknikal Malaysia Melaka (UTeM)

- Developed a clothing store management system using C++ and MySQL, automating product management and sales tracking.
- Reduced manual data entry and improved operational efficiency.

Plant Ordering System

Flutter Project – 2021

- Built a Flutter-based application to facilitate plant sales and management, enabling admins to manage customer records, monitor product listings, and streamline the ordering process.
- This project emphasized providing a smooth user experience and transparency in transactions.

EDUCATION

Bachelor of Computer Science (Software Development)

Universiti Teknikal Malaysia Melaka (UTeM) | Melaka, Malaysia | 2024

Awards & Honors: Achieved recognition for academic excellence by being placed on the Dean's List for two consecutive semesters at Universiti Teknikal Malaysia Melaka (UTeM).

SKILLS

Programming Languages: TypeScript, JavaScript, Java, Kotlin, Python, PHP, C++, HTML, CSS

Frontend: React, Angular, Next.js, Vue.js, Flutter, Tailwind CSS, React Hook Form

Backend: Node.js, Express.js, AdonisJS

Databases & ORM: MySQL, PostgreSQL, TypeORM

DevOps & Version Control: Git, GitHub Actions, CI/CD

Authentication: JWT, OAuth2

Tools & Platforms: Windows Server, Linux, Firebase, Android Studio, Figma

AI/ML: TensorFlow
